

Student projects FP2P guidelines/remarks:

- Included in this module you will find the powerpoint 'FP2P_projects_Simone' which I used to introduce the projects which provides an overview of the work to be done.
- We will start our meetings with all my groups together (Zoom link in Canvas) to discuss the shared elements of the assignments and organization of this assignment, or any issues that are relevant for all groups. I will then set up break-out rooms for each group, in which you will work together on the assignments. I might join, or you could ask me to join during the 4-hour scheduled meetings.
- I can be mailed for technical / coding problems, I'll try to respond rapidly and we can have additional 1:1

meetings if needed. S.saitta@amsterdamumc.nl

- Assign one of you as the coordinator and let me know at the end of the first meeting
 - Chairs your meetings when needed
 - Final decisions on what to do if you disagree
 - Is not the boss
 - Does not do all the work
- Make a task distribution and let me know at the end of the first meeting
 - Presentation by ~2 persons suggestion
 - Report also suggestion to do this by 2 persons
 - Make sure everyone contributes to content of report / presentation
 - Problem analysis and plan to tackle this is group process
 - Algorithm development: the basic functional plan is also a group process
 - Detailed coding: distribute and make sure your parts work together (discuss what a class contains in methods and properties)
 - Make sure everyone contributes to coding
- OK to collaborate between groups, e.g. exchange of plotting code, if you find this meaningful
- Keep a diary on your meetings: who/when/what/action list
- Report: concise abstract/intro/methods/results/discussion/literature

- Submit well-documented python code as appendix. Your main.py should generate all the results that you have in your report (FAIR principle: Findable/ Accessible/ Interoperable/Reproducible)
- Submit a 'who did what' table as appendix
- You are all authors, add a statement that 'all authors have read the report and agree with its submission'. Yep we do this in real life too.
- Presentation: along lines of report, 11+3 mins
- We will rehearse the presentation on Thursday October 15
- Grading: same grade for all group members, unless you or we find that this is really unfair
- 20% presentation (judged by Simone/Ed/Ivo), 20% report (Simone, Ed or Ivo), 30% exam Ivo, 30% exam Ed/Simone. We may adapt the group score if your performance as a group is above/below what we expect.
- Questions you may discuss; suggest that you do this by Friday October 2 so that we can discuss this
- If you are familiar with GitHub, regular commits are strongly encouraged.
